

Classroom Observation Form

Instructor: Amin Abubakar

Course: Physics

Peer/Observer: Ernie Boyd

Date and Time: 30 November 2018, Period 3

Use criteria that apply to format of course observed. Criteria in **red** were observed directly

Review Section	Description/Comments
1. SUBJECT MATTER CONTENT (shows good command and knowledge of subject matter; demonstrates breadth and depth of mastery)	
2. ORGANIZATION (organizes subject matter; evidences preparation; is thorough; states clear objectives; emphasizes and summarizes main points, meets class at scheduled time, regularly monitors on-line course)	- You started with a recap from the previous lesson with this you approached it carefully and the students responded well to this. However I did feel that the way in which you articulated your questions could have been clearer and not so open-ended (especially for revision) Another way to have students provide feedback could be in pairs, with a set time frame which would allow students to give extended thoughts in a non-threatening environment - Lesson objectives were given which is great for students as they were aware of what the plan was for the lesson - Through the main activity you had mini-conferences to gauge student understanding and also provided an opportunity to ascertain the students ability to use the skills you have taught
3. RAPPORT (holds interest of students; is respectful, fair, and impartial; provides feedback, encourages participation; interacts with students, shows enthusiasm)	Is fairly high for a new group of students, your ability to interact and reach your students is high and something to celebrate.
4. TEACHING METHODS (uses relevant teaching methods, aids, materials, techniques, and technology; includes variety, balance, imagination, group involvement; uses examples that are simple, clear, precise, and appropriate; stays focused on and meets stated objectives)	- Appropriate technology was used. - The activity was clearly laid out and all students had roles to play and were accordingly engaged.
5. PRESENTATION (establishes online course or classroom environment conducive to learning; maintains eye contact; uses a clear voice, strong projection, proper enunciation, and standard English)	

Review Section	Description/Comments
6. MANAGEMENT (uses time wisely; attends to course interaction; demonstrates leadership ability; maintains discipline and control; maintains effective e-platform management)	
7. SENSITIVITY (exhibits sensitivity to students' personal culture, gender differences and disabilities, responds appropriately in a non-threatening, pro-active learning environment)	
8. ASSISTANCE TO STUDENTS (assists students with academic problems)	
9. PERSONAL (evidences self-confidence; maintains professional comportment and appearance)	
10. PHYSICAL ASPECTS OF CLASSROOM (optional) (state location and physical attributes of classroom, number of students in attendance, layout of room, distractions if any; list any observations of how physical aspects affected content delivery)	

Strengths observed:

You have a great classroom environment that you create for your students to openly engage with the content. It is clear that you have included a fair amount of rigor in the course through the activity in this class. Students had to work in an unknown situation and derive data and explain their thoughts around this too. It is important for students in MYP5 to still inquire in class activities and not just regurgitate content. Your rapport with your students is high and this makes your class inviting and students are happy to share their thoughts freely, be encouraged to make use of this to heighten the engagement students have.

Suggestions for improvement:

To achieve a more authentic enquiry experience in class setting goals and requirements is key. I would suggest the following changes to give you more data to grade, more opportunities for students to show specific understanding of concepts and content.

- Provide criteria based engagements – the specific strand you would be grading, even in formative work, can be communicated to students so they are considering what you are looking for through their engagement with tasks
- Ensure that the ATL skills are explicitly included in the instructions, these are not what we expect students to naturally do but we need to ask them to use specific skills in the class.
- Allow your Inquiry Questions to lead your inquiry – let your inquiry questions in your unit plan be the over-arching thought for a lesson. This is a great way to start and then end a class too.

These are just three small adjustments you could make to your class to your instructions to create a more authentic MYP class.
